- Concerts on the Green in California

## *Lander Community and Convention Center*

Wind River Sound can supplement the in-house sound system or provide a separate sound system for theatrical performances, live musical concerts, special banquets, conventions, etc. indoors or outdoors.

We can control the sound from the back of the Great Hall at South or West walls to insure that the loudest and softest voices are heard equally and that the sound has the right equalization for clarity and impact.

You determine the sound levels during the event and we maintain it with sound meters & sound processors.

Wind River Sound helped design the in-house sound system in the Great Hall specifically for theatrical performances and musical concerts.
